

Closing the Loop with Plant Powered Materials

erthos materials are designed for the new circular economy where what's made from our planet, goes back to our planet!

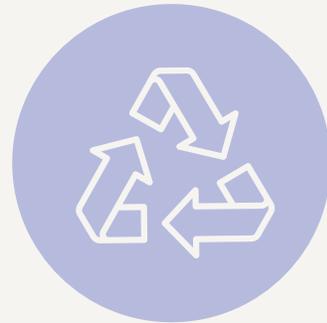

Here are 2 ways to safely dispose and maximize the environmental benefits of products made with erthos plant powered materials:

COMPOST

Products made with erthos materials can be [composted](#) in commercial or at-home countertop systems. Depending on the size and thickness of the product made with erthos materials, we recommend breaking it apart into smaller pieces to help jumpstart nature's process.

After successfully composting, our materials are turned into nutrient-rich fertilizer used to enrich soils, and the plants that grow in them.

RECYCLE

If composting is not accessible for you in your home or city, products made with erthos materials can also be returned to us or a local partner to be [recycled](#) and turned into new plant powered products!

Products being returned cannot be contaminated by food or chemicals with degradative properties such as liquids with a high or low pH. [Contact us](#) to learn more.
